

Simplify Billing with Logis by ESO: Automate, Save Time, and Increase Accuracy

Logis by ESO brings automation and exception management to your billing process. A robust and customized billing tool for emergency and patient transport, **Logis by ESO Billing** is the solution you need in the fast-paced world of mobile healthcare.

Make billing simpler, faster, and more reliable.

Here are the key benefits Logis by ESO Billing brings to your team:

Modern, easy-to-use interface

Intuitive design makes it easy for new users to learn quickly with minimal training so they can navigate the system with confidence.

Reduced manual work and costs

Routine billing is automated to reduce manual work, which lowers operational costs and minimizes the risk of costly errors. The cloud-based setup also removes the need for local servers and IT infrastructure.

Increased productivity and efficiency

Tasks including data entry, claim submissions, third-party verifications, and field population are automated, allowing your team to improve productivity across billing workflows.

Accurate data through discrepancy detection

Automated analysis of data from CAD, ePCR, and Billing systems identifies discrepancies early, ensuring accurate claims, minimizing rejections, and boosting successful submissions.

Explore the features included in Logis by ESO Billing

Cloud-based system

Securely accessible from any internet-connected device, removing the need for local servers and reducing costs.

Less data entry

Data imports from IDS allow for quick access and NEMSIS data fields from the ePCR import into the tasks, reducing manual entry.

Patient alerts that follow the patient

Alerts accompany the patient across tasks, claims, and remits.

Scheduled rules

Automated workflows that utilize starting conditions and rules steps to drive tasks, claims, and invoices through the revenue cycle.

Data discrepancy identification

Integrated data from CAD, ePCR, and Billing into a unified platform, applying business rules to validate accuracy and detect discrepancies.

Quick navigation links

Direct links between tasks, claims, remits, and invoices enable users to easily navigate and access related information.

Expedited training process

Streamlined with fewer tabs and one-page views, the system is designed to be user-friendly, allowing new users to learn it quickly.

Automated third-party verification

Workflow automation related to third-party verification vendor responses, with status updates according to configuration.

Streamlined processes

Rule-based automation removes repetitive steps, and end-to-end workflows reduce touches per incident for complete Ambulance Revenue Cycle management.

Automation through import rules

Rule-based configuration that allows system-generated edits to automatically populate fields in the pre-billing and billing process.

Background job monitoring

Monitor large tasks, like report generation, remit processing and bulk action while allowing users to check progress or revisit as needed.

Contract invoicing and management

Flexible contract invoicing schedules (individual, weekly, bi-monthly, and monthly) and quick view invoice management capabilities.

Immediate access to remittance advices

Remittance advice is instantly available for processing upon arrival from the clearinghouse, eliminating the need for time-consuming manual batch uploads.

Provided priority (level of service) automation

Automatic assignment of the level of service by using the CMS service level values, along with direct visualization and use of procedures, and medications administered during service.

Robust membership payment process

Facilitates batch membership payments, automatically updates effective dates, assigns sponsors and donation funds, and manages household member assignments, including direct head-of-household transfers.

Membership/programs

Enables direct configuration and management of memberships and programs, including claim adjustments, renewals, PMPM capabilities, MIH tracking, member imports, and financial tracking.
